

Bucky's Construction Update as of August 15, 2016

- It was reported that the construction crew is on schedule to finish the construction, landscaping and fence installation in September.
- City staff approved the pre-pour for the concrete retail store floor.
- The electrical cabinet has been set and transformer pad has been placed.
- The last section of the underground storm water retention has been backfilled.
- Buchanan Energy's attorney reported last week that Bucky's will NOT be installing the vacuums on the site. They will continue with the underground electrical work, but the vacuums will not be installed. In the event that the vacuums are installed in the future, they will need to demonstrate to the City that the vacuums will meet the City's performance standards before the vacuums are installed. The air compressor (for tires) will be installed. Similarly, the air compressor is required to meet performance standards.

Please advise if you have any questions.
